

Summary Report – Online Learner Purchase Behaviour Analysis

Key Insights from the Analysis

1. **Course Demand:** Courses related to **Database and Programming** categories show strong purchase activity, indicating high demand for technical skills.
 2. **Top Purchased Courses:** A small number of courses contribute to the majority of purchases, showing that certain courses are significantly more popular than others.
 3. **Revenue Distribution:** Total revenue varies across courses and categories depending on **course price and purchase quantity**.
 4. **Learner Engagement:** Some learners purchased **multiple courses and across different categories**, suggesting higher engagement and interest in skill diversification.
 5. **Category Performance:** Categories such as **Data Visualization, Programming, and Database** contribute noticeably to platform revenue through course purchases.
 6. **Cross-Category Learning:** Several learners enrolled in courses from more than one category, indicating opportunities for **cross-selling related courses**.
 7. **Unpurchased Courses:** A few courses have **no purchase records**, indicating potential issues with visibility, pricing, or learner interest.
-

Recommendations

- Focus marketing efforts on **high-performing course categories** such as programming and data-related skills.
- Introduce **course bundles or learning paths** to encourage learners to purchase multiple courses.
- Promote **underperforming courses** through discounts or featured placement on the platform.
- Provide **personalized course recommendations** to learners who have already made purchases.
